(54) TRANSMITTER AND RECEPTION UNIT

(57) Abstract:

PURPOSE: To provide a transmitter disabling decoding of a code number while hiding a revision rule of the code number by allowing the transmitter to generate the revision code number for not only a fixed number but also a code number.

CONSTITUTION: The transmitter 100 is provided with a memory 103 having an area storing a fixed code and a code number sequentially revised every time the transmitter 100 is operated and a transmission circuit 101 generating a revision number through the prescribed arithmetic operation to the fixed number, generating a revision code number through a prescribed arithmetic operation with respect to the code number and outputting the generated revision number and the revision code number to a reception circuit 202.
